

Shared Use Locks

3310/3315 Push Button Mechanical

The 3310 and 3315 Push Button Locker Locks are the newest addition to Zephyr Lock's product portfolio. The push button locker locks are truly unique in terms of simplicity, reliability, cost effectiveness and style, blending the best of mechanical and electronic locker locking solutions. The 3310 and 3315 are ideal for high volume shared use facilities. The 3310 vertical design is extremely versatile and can be mounted into nearly any metal, wood, phenolic or plastic locker. The 3315 is a horizontal mount for multiple uses including casework applications.

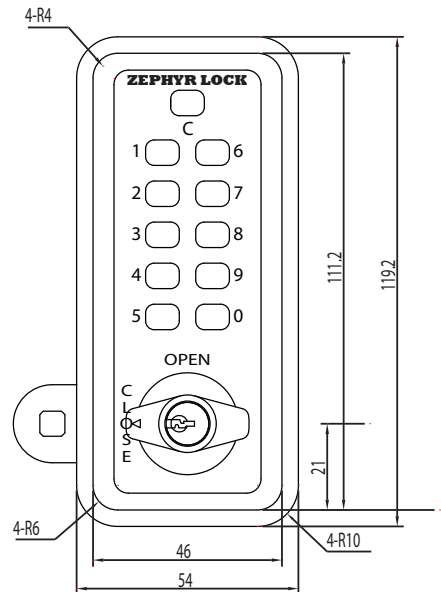

Users are able to quickly and confidently secure their personal items while using a facility. Each new user enters their own self-selected code each time they choose to secure and then access their belongings. In case of an emergency, supervisors are able to access locks easily with a Control Key.

FEATURES

- Shared use operation allows user to select own code to lock; lock clears after opening making it available for next user
- Push button for easy operation; simple and reliable design and use
- Control Key override management has ability to access lockers without tools or combination records at all times
- 10-digit keypad with input button; extremely secure with a wide variety of combinations
- Cam lever locking mechanism can be modified to fit nearly any locker configuration
- Retrofit kit ability to mount lock on existing lockers
- Manual Turn Knob Always ready; No batteries or power required
